STD-0300-2 Rev. A

Typically, a series of 3-6 treatments spaced in four week intervals is recommended depending on the specific concern.

COLLAGEN P.I.N.®

THE EVOLUTION  
of Microneedling

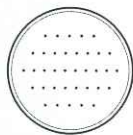

## MICRONEEDLING FOR CLINICAL PROFESSIONALS

Microneedling treatments allow for controlled induction of the skin's self-repair mechanism by creating micro "injuries" in the skin which trigger new collagen synthesis. Collagen P.I.N.® treatments are generally less invasive than other aesthetics treatments with less downtime.

### WHAT IS THE COLLAGEN P.I.N.?

The Collagen P.I.N.® is a microneedling device that mechanically punctures and injures skin tissue through use of a 36-needle arrangement of medical grade stainless steel sterilized needles. The small punctures and minor injuries to the skin promote a healing response that reveals a visible transformation to the treated area.

Each Collagen P.I.N.® treatment is administered with disposable, individually sterilized 36-pin medical grade needles in a radial arrangement.

### DOES MICRONEEDLING HURT?

Prior to treatment, your medical provider will apply a topical numbing agent. Most microneedling patients report feeling little-to-no pain at all once a topical numbing agent has been applied.

In a clinical trial, 94% of patients reported NO dryness, roughness of skin, itching, and burning - and 64% reported NO tightness, erythema, and edema post-treatment.

## DEVICE FEATURES

### HOW LONG TO SEE RESULTS?

Patients typically report seeing results after just one treatment but individual results vary based on individual skin health.

Commonly, patients report seeing positive changes as soon as 1-2 weeks after the first treatment. However, a series of treatments is recommended for better, lasting results.

### HOW LONG WILL RESULTS LAST?

Microneedling results vary based on the area being treated, the needle depth chosen by your provider and your individual skin health.

Overall, microneedling results will last longer in conjunction with follow-up skincare to complement treatments and aesthetic procedures.

It's typical for a series of 4-6 treatments to be scheduled twice a year for most aesthetic skin concerns.

### APPEARANCE AFTER TREATMENT

Controlled creation of percutaneous microchannels in the skin with minimal damage to the epidermis create an optimal environment for skin to heal.

Minimal downtime when used in conjunction with suitable post-care products means faster reduction in the appearance of facial imperfections from scarring.

\*The Collagen P.I.N.® is FDA cleared as a treatment to improve the appearance of facial acne scars in adults 22 years and older in Fitzpatrick Skin Types I-III
